Manager: **Dinesh Katam**

Gameweek 27 Report

1373	5,210,205	GW27
Total Points	Overall Rank	Current GW

Season Summary

1373	5,210,205	1,776,374	27
Total Points	Current Rank	Best Rank	GWs Played

Key Statistics

Metric	Value
Points per Gameweek (Average)	50.9
Best Gameweek Score	80 (GW4)
Worst Gameweek Score	29 (GW2)
Best Overall Rank	1,776,374
Total Points on Bench	216
Average Bench Points	8.0
Squad Value	£97.3m
Bank Balance	£0.8m
Transfers Made	7
Transfer Hits	-0 points
Free Transfers	5 (GW28)
Chips Available	4/4
Chips Used	wildcard (GW17), freehit (GW18), bboost (GW19)

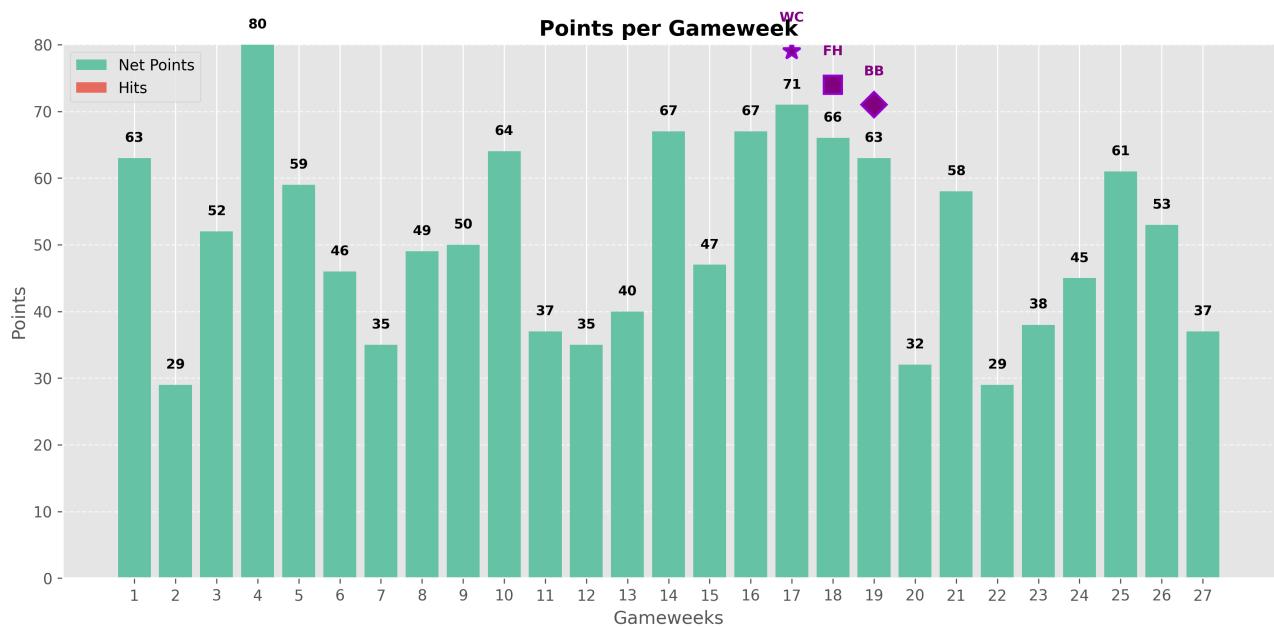

Captain Performance

Captain Pts Earned	Optimal Captain Pts	Pts Left on Table	Hit Rate (Top-3)
188	315	127	59.3%

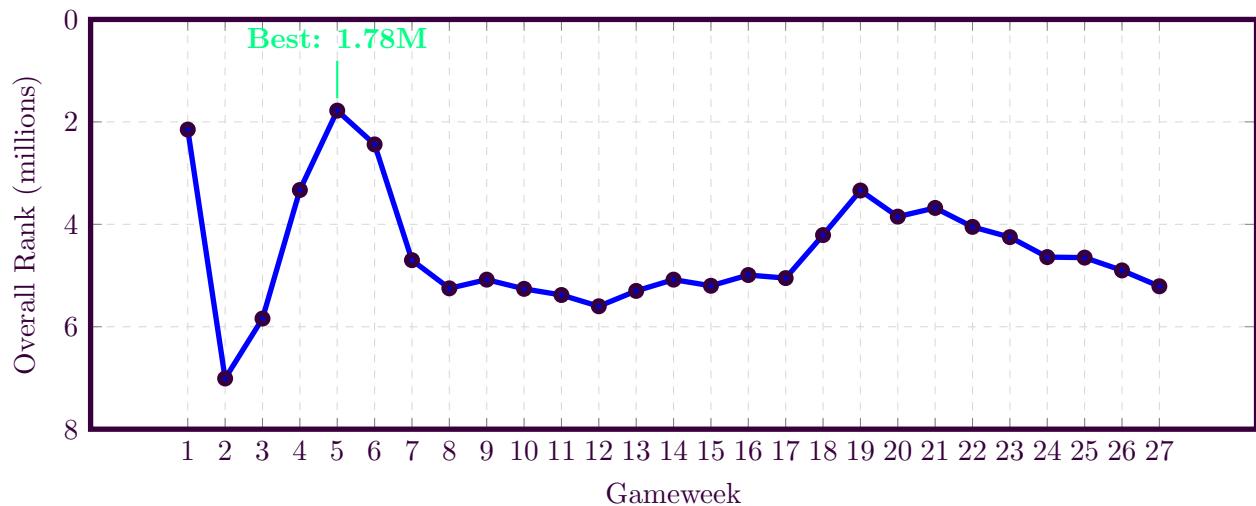

Over 27 GWs. Hit rate = % of weeks where captain was among top-3 starting scorers.

Player Contribution Analysis

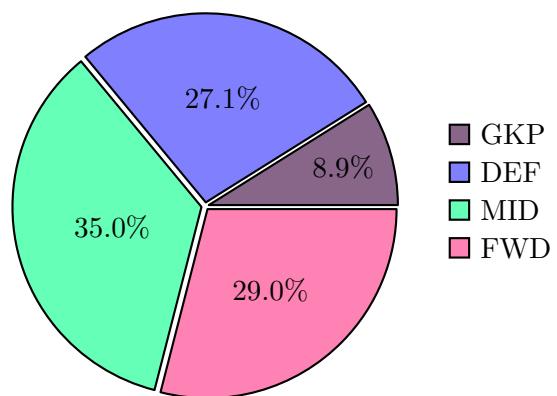

Hindsight Fixture Analysis

This analysis shows fixture difficulty (with opponents) alongside actual points scored. Use it to evaluate how well fixture difficulty predicted performance and identify which players over/under-performed relative to their schedule.

Points by Position

Position	Points	Share
GKPs	140	8.9%
DEF	429	27.1%
MID	554	35.0%
FWD	458	29.0%
Total	1581	100%

Current Squad (GW27)

Player Deep Dive Analysis

This section provides comprehensive metrics for each player in your squad, organized by position. The table includes performance stats, expected metrics, ICT analysis, and peer comparisons.

Goalkeepers

Player	Team	Price	Own%	Pts	PPG	Form	Mins	Bonus	ICT	Saves	CS (CS%)	Peer%
Roefs	SUN	£4.9m	11.4%	110	3.9	↓ 2.4	2520	9	74.3	85	8 (29%)	85%
Dúbravka	BUR	£4.0m	32.4%	78	2.8	→ 1.0	2520	7	78.7	103	3 (11%)	68%

Defenders

Player	Team	Price	Own%	Pts	PPG	Form	Mins	Bonus	ICT	CS (CS%)	Goals Conc.	Peer%
Tarkowski	EVE	£5.7m	10.7%	121	4.3	→ 1.8	2520	6	113.6	9 (32%)	33	84%
Guéhi	MCI	£5.2m	36.7%	132	5.1	→ 4.2	2340	9	116.5	10 (38%)	27	96%
Alderete	SUN	£4.1m	6.3%	93	3.9	→ 2.8	2083	5	91.1	7 (30%)	29	82%

Advanced Finishing & Creativity Analysis

This section provides visual analysis of your squad's finishing efficiency and creative output compared to league-wide performance. Charts show both single-gameweek and season-cumulative metrics, with your squad players highlighted in bold.

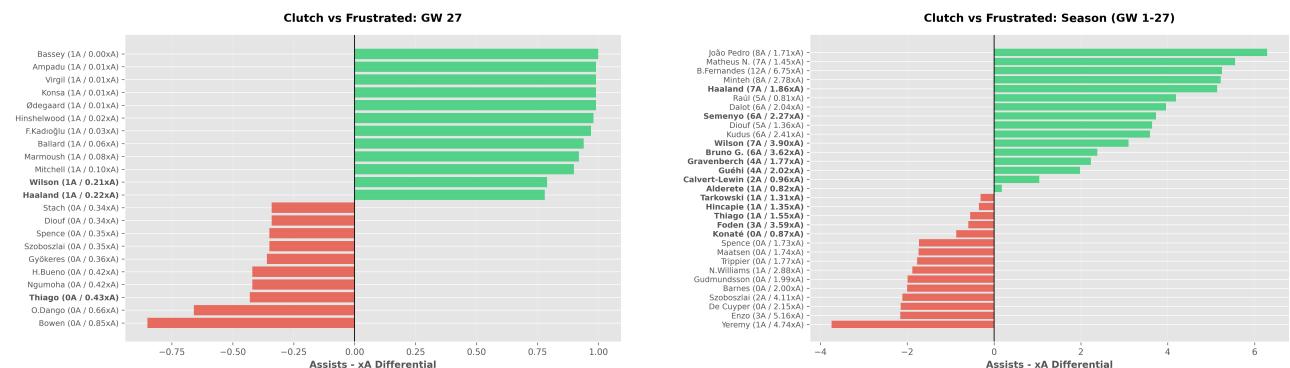

Clinical vs Wasteful: Goals

Green bars indicate clinical finishers ($\text{Goals} \downarrow \text{xG}$), while red bars show wasteful players ($\text{Goals} \uparrow \text{xG}$). Your squad players are highlighted in bold.

Clutch vs Frustrated: Assists

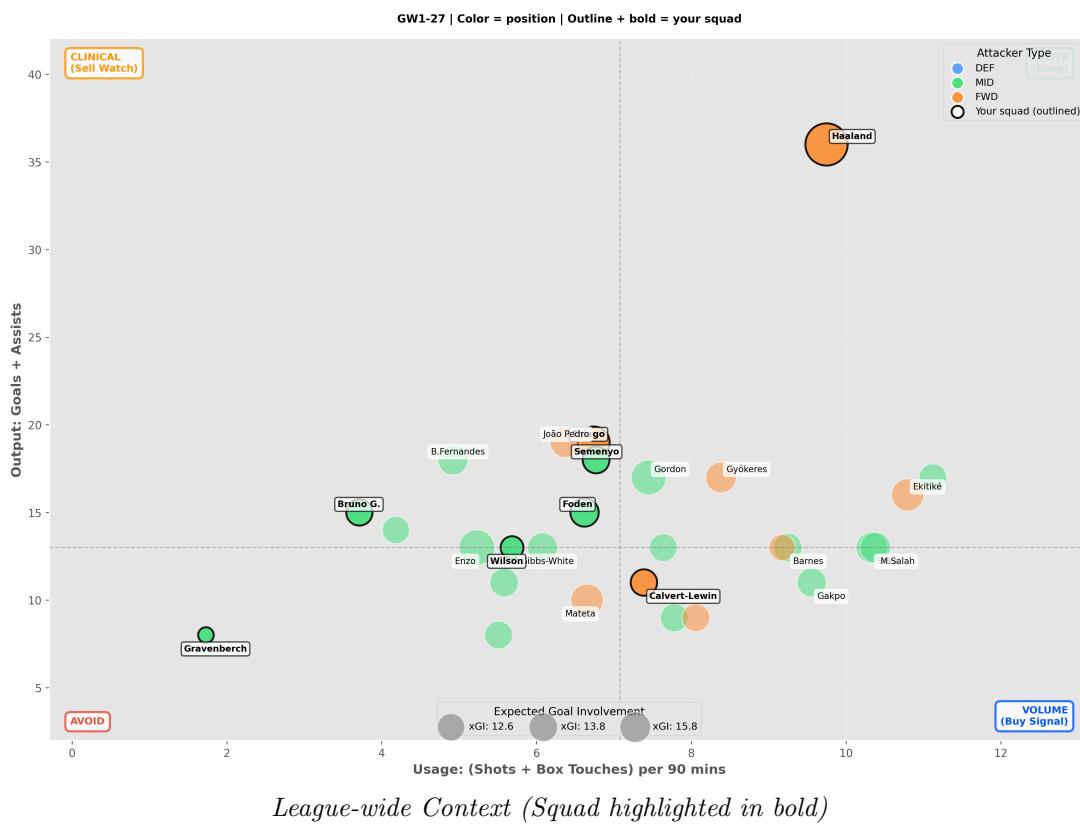

Green bars indicate clutch playmakers ($\text{Assists} \downarrow \text{xA}$), while red bars show frustrated creators ($\text{Assists} \uparrow \text{xA}$).

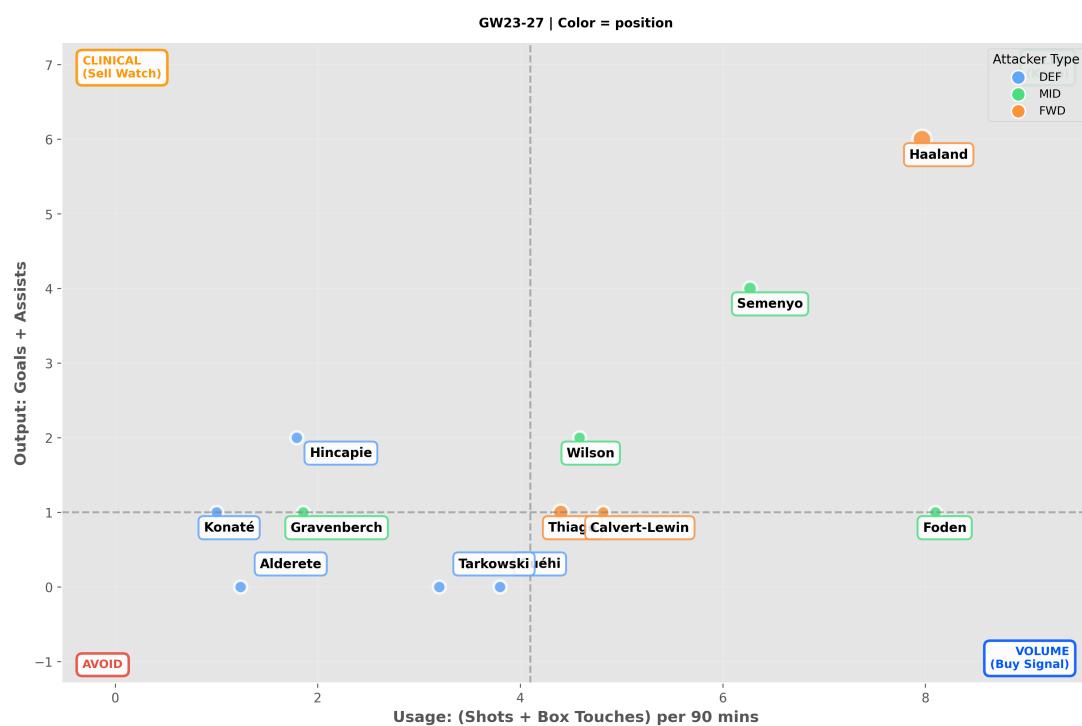

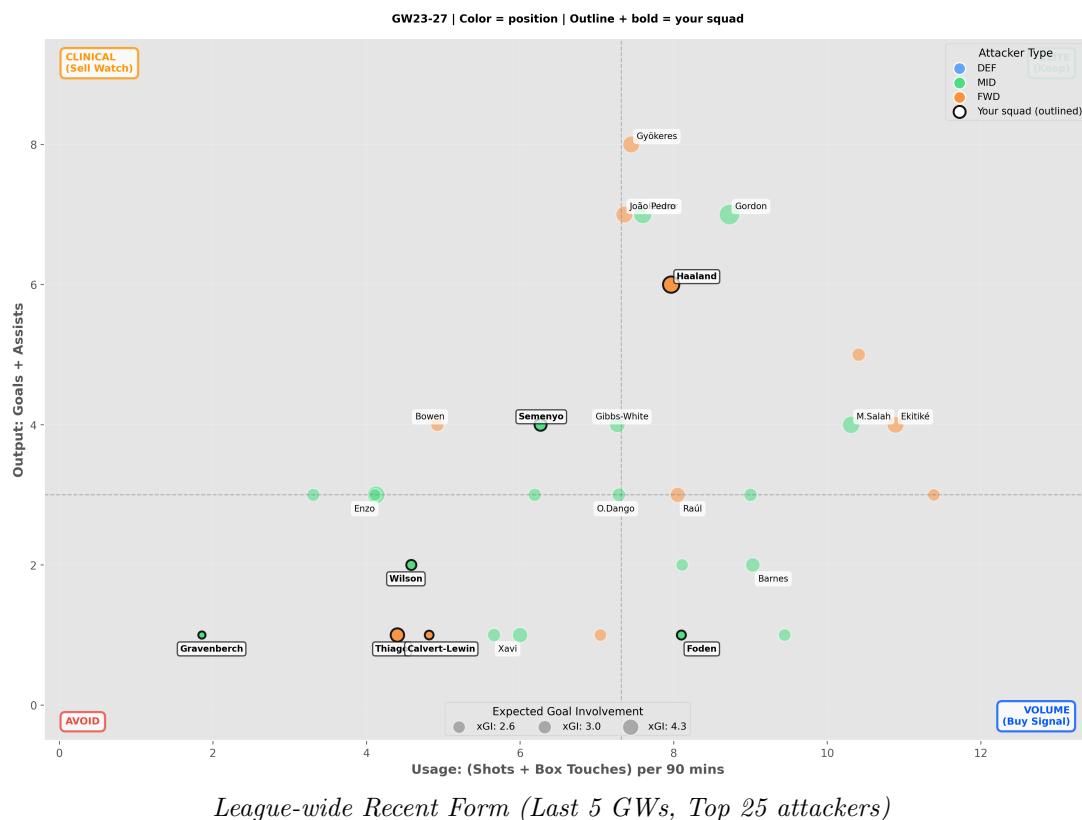

Usage vs Output Analysis

HOW TO READ THIS CHART

- Usage (X):** Shots + Box Touches per 90
- Output (Y):** Goals + Assists
- Bubble:** xGI (expected involvement)
- Color:** DEF/MID/FWD (outline + bold = your squad)
- GW Range:** Shown in title (e.g. GW1-17, GW12-17 last 5)
- Quadrants:** ELITE (high/high); VOLUME (high use, low returns - buy); CLINICAL (low use, high returns - sell watch); AVOID (low/low)

Usage vs Output Tables

Top Attackers - Season (GW1-27)

Player	Pos	Use/90	G+A	xGI	Pts	Player	Pos	Use/90	G+A	xGI	Pts
Haaland	FWD	9.75	36	29.79	193	Gyökeres	FWD	7.44	8	4.78	36
Thiago	FWD	6.74	19	16.94	135	Gordon	MID	8.73	7	7.06	15
João Pedro	FWD	6.37	19	15.06	139	Palmer	MID	7.6	7	5.52	37
Semenyo	MID	6.77	18	11.94	157	João Pedro	FWD	7.36	7	4.77	47
B.Fernandes	MID	4.92	18	15.18	145	Haaland	FWD	7.97	6	4.43	28
Cherki	MID	11.12	17	12.66	91	Igor Jesus	FWD	10.41	5	2.97	15
Gyökeres	FWD	8.38	17	15.62	91	Ekitiké	FWD	10.89	4	4.72	20
Gordon	MID	7.45	17	20.19	68	M.Salah	MID	10.31	4	5.04	21
Ekitiké	FWD	10.8	16	17.48	106	Gibbs-White	MID	7.27	4	4.06	21
Foden	MID	6.62	15	13.41	109	Semenyo	MID	6.27	4	2.4	35
Bruno G.	MID	3.71	15	11.51	134	Bowen	FWD	4.92	4	2.97	31
Szoboszlai	MID	4.18	14	12.44	100	G.Jesus	FWD	11.39	3	2.58	7

- Focal point: Cherki leads usage at 11.1/90 (GW1-27).
- End product: Haaland tops G+A with 36 (GW1-27).
- Underlying strength: Haaland leads xGI at 29.79 (GW1-27).

- Focal point: G.Jesus leads usage at 11.4/90 (GW23-27).
- End product: Gyökeres tops G+A with 8 (GW23-27).
- Underlying strength: Gordon leads xGI at 7.06 (GW23-27).

Defensive Value Charts

How To Read This Chart

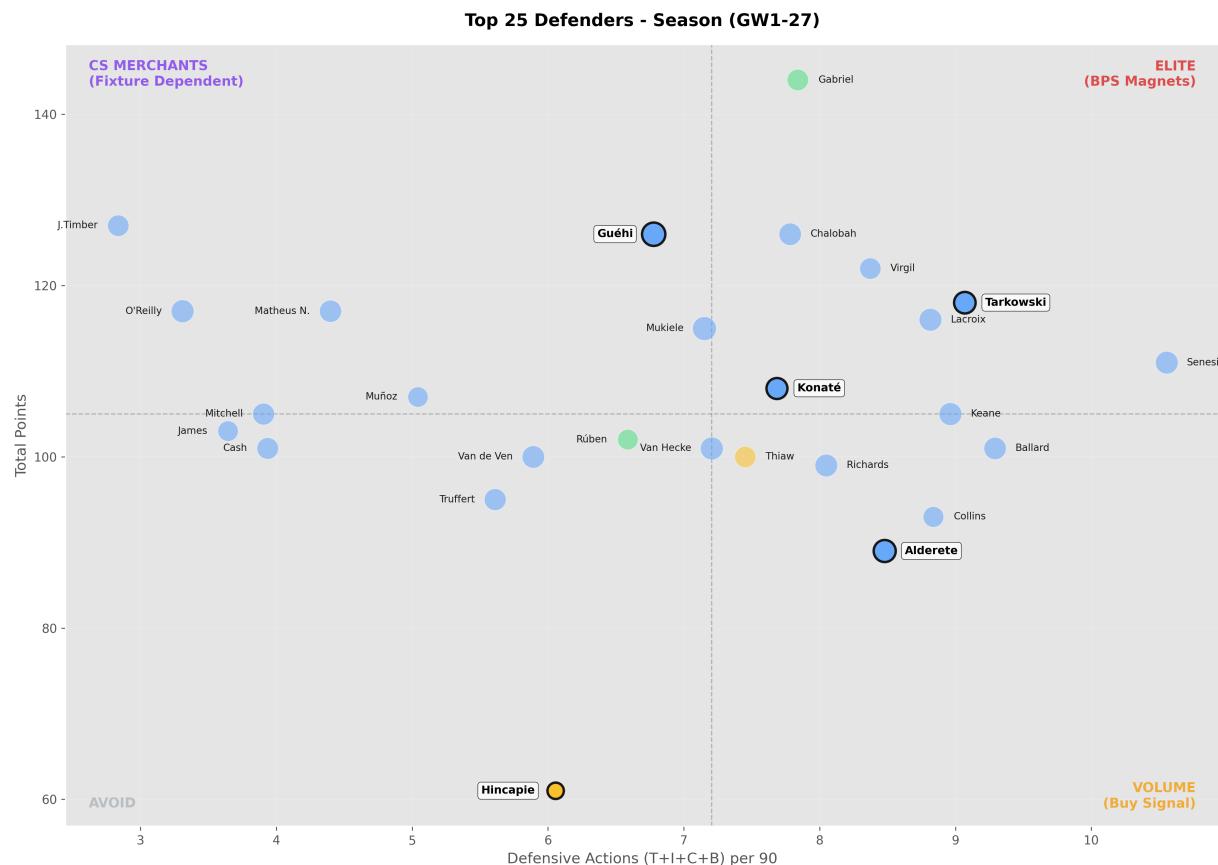

- **X-Axis (Defensive Actions):** Tackles + Interceptions + Clearances + Blocks per 90 mins
- **Y-Axis (Points):** Total FPL points over the period
- **Bubble Size:** Price efficiency (pts/£m) - bigger = better value
- **Top-Right (ELITE):** High defensive activity AND high points - the complete defender package
- **Bottom-Right (VOLUME):** High activity but low points - buy signal if clean sheets improve
- **Top-Left (CS MERCHANTS):** Low activity but high points - riding clean sheets, fixture dependent

Transfer Strategy & Planning Horizon

Expected Value Analysis (Next 5 GWs)

Model Confidence: Medium

MAE: 2.23 RMSE: 3.03 R²: 0.082

Transfer Intelligence

Intelligence layer enabled - model: gpt-5.2

GW27–31 transfer plan: chase +29.6 projected points with selective upgrades

Over the next 5 GWs (GW27–31), the optimizer projects 195.0 expected points vs your current 165.4, a +29.6 swing to target via 2–3 high-leverage transfers rather than broad churn. Execute changes that directly close the 29.6 gap while respecting medium model confidence (overall MAE 2.23, RMSE 3.03, low R² 0.082), prioritizing positions with better predictive signal (MID R² 0.11, MAE 2.07) and being more cautious with FWD (R² 0.04, MAE 2.51).

Metric Highlights

- 5-GW horizon: optimized_xp 195.0 vs current_xp 165.4 (potential_gain +29.6)
- Model confidence: medium; global error MAE 2.23, RMSE 3.03 with low R² 0.082 (noisy individual forecasts)
- Best-performing position model: MID MAE 2.07 and R² 0.11 (more reliable upgrade targets)
- Highest-uncertainty position: FWD MAE 2.51 and R² 0.04 (treat forward moves as higher variance)
- Training coverage is strong (train 11,671; validation 1,063; 52 features; 300 players), but validation is on recent GWs 24–27, supporting near-term use with caution

Actions

- Prioritize 1–2 midfield upgrades first to capture the largest share of the +29.6 gain using the most reliable position signal (MID MAE 2.07, R² 0.11) before making optional higher-variance moves elsewhere.
- If additional moves are needed, consider defenders next (DEF R² 0.056, MAE 2.36) rather than forwards, as FWD projections are least stable (R² 0.04, MAE 2.51).
- Avoid unnecessary goalkeeper transfers unless they directly unlock a sizable portion of the +29.6, as GKP signal is modest (R² 0.053, MAE 2.25) and tends to deliver incremental gains.
- Limit total transfer churn across GW27–31 to the fewest moves that materially close the optimized_xp gap (195.0 target), given low overall explanatory power (R² 0.082) and medium confidence.

Risks

- Low overall R² (0.082) implies forecasts explain limited variance; the +29.6 gain may not fully materialize in realized points.
- Forward transfers are particularly volatile (FWD R² 0.04, MAE 2.51), increasing the risk of paying transfer costs for uncertain upside.
- Defender and goalkeeper gains may be smaller and harder to predict (DEF R² 0.056; GKP R² 0.053), so over-investing transfers there can under-deliver versus the 195.0 optimized_xp target.
- Medium confidence plus RMSE 3.03 indicates occasional larger misses; keep flexibility rather than committing to a rigid multi-week transfer script.

Wildcard Strategy Notes

Intelligence layer enabled - model: gpt-5.2

Wildcard draft flags: over-optimistic XP and zero flexibility

Your 4-4-2 uses the full 98.1 budget with 0.0 ITB, leaving no flexibility to react to price swings. The model signals a major mismatch between your current XP (165.4) and optimized XP (134.3), with a negative potential gain (-31.1), suggesting your draft assumptions or minutes/role expectations are inflated. Captaincy is on Ekitiké while the top XI by XP also includes B.Fernandes, Semenyo, Raya, and Anderson.

Metric Highlights

- Budget: 98.1 spent out of 98.1 with 0.0 ITB (no upgrade/price-move buffer).
- XP mismatch: current_xp 165.4 vs optimized_xp 134.3 (potential_gain -31.1).
- Captain/VC: Ekitiké (C) and B.Fernandes (VC); both appear in top_xi_by_xp list.
- Top XI by XP names include Ekitiké, B.Fernandes, Semenyo, Raya, Anderson (key contributors to your projected points).

Actions

- Recalibrate expectations: the -31.1 potential_gain vs the optimized_xp baseline indicates your current_xp (165.4) is likely overstated—recheck minutes/role/security for the core XP drivers (Ekitiké, B.Fernandes, Semenyo, Raya, Anderson).
- Create flexibility by freeing funds: with 0.0 ITB on a 98.1 spend, target at least 0.5–1.0 ITB via a small downgrade in a non-captaincy slot to reduce risk from price changes.
- Captaincy sanity check: keep captaincy on a top-XI-by-XP player (currently Ekitiké) but compare his projection stability against B.Fernandes (VC) since both are central to your current_xp.

Risks

- Zero ITB risk: 0.0 ITB means any price rise can block optimal transfers and force hits.
- Projection risk: current_xp 165.4 being 31.1 above optimized_xp 134.3 suggests inflated assumptions that may lead to underperformance when reality matches the optimizer.
- Concentration risk: the draft's projected output leans heavily on a small set of top_xi_by_xp players (Ekitiké/B.Fernandes/Semenyo/Raya/Anderson); if one misses minutes, the 4-4-2 structure may struggle to compensate.

Free Hit Strategy Guide

Intelligence layer enabled - model: gpt-5.2

GW31 Free Hit Draft (3-4-3): Balanced build but underperforms optimizer by 2.9 XP

Balanced 3-4-3 for GW31 with 0.3 ITB (97.8/98.1 spent). However, the draft projects 30.0 XP versus optimized 27.1 XP, implying a -2.9 potential gain relative to the optimizer baseline; validate that the higher current_xp is driven by reliable minutes/upside rather than fragile assumptions. Captaincy is on Raúl with vice on Rayan, leaning into your listed differentials (Rayan plus Martinez/Thiaw/Hall/Gordon) to separate in a small league sample (n=4).

Metric Highlights

- Target GW: 31; Formation: 3-4-3; Strategy tag: balanced
- Budget: 98.1 total, 97.8 spent, 0.3 ITB
- Projection gap: current_xp 30.0 vs optimized_xp 27.1; potential_gain -2.9
- League context: sample size 4 (differential value is amplified in small leagues)
- Differentials included: Martinez, Thiaw, Hall, Rayan, Gordon; captain Raúl, vice Rayan

Actions

- Re-check the source of the 30.0 current_xp given the optimizer shows 27.1 (gap 2.9): confirm minutes/security and any assumed bonuses are realistic before locking.
- Keep 0.3 ITB intentionally for late news flexibility, since you're already at 97.8/98.1 and small changes can be constrained without funds.
- Captaincy: stick with Raúl as captain only if he is the highest-confidence minutes + upside pick in your pool; otherwise consider switching to reduce variance since your optimizer baseline is lower by 2.9.
- If chasing upside in a 4-team league sample, prioritize starting the listed differentials (Martinez/Thiaw/Hall/Rayan/Gordon) in the XI over bench to maximize the payoff of low-owned picks under a Free Hit.

Risks

- Negative potential_gain (-2.9) vs optimized_xp suggests the draft may be relying on assumptions that the optimizer penalizes (e.g., minutes/role/variance), increasing downside.
- With only 0.3 ITB, you have limited ability to pivot if late GW31 news breaks unless you also accept downgrades elsewhere.
- Captain/vice on Raúl/Rayan concentrates outcome risk; if either fails, the 30.0 XP expectation can drop quickly, especially when combined with multiple differentials.
- Differential-heavy build (5 named differentials) can be high-variance; in a small league sample (4), this can win big or lose big depending on minutes and conversion.

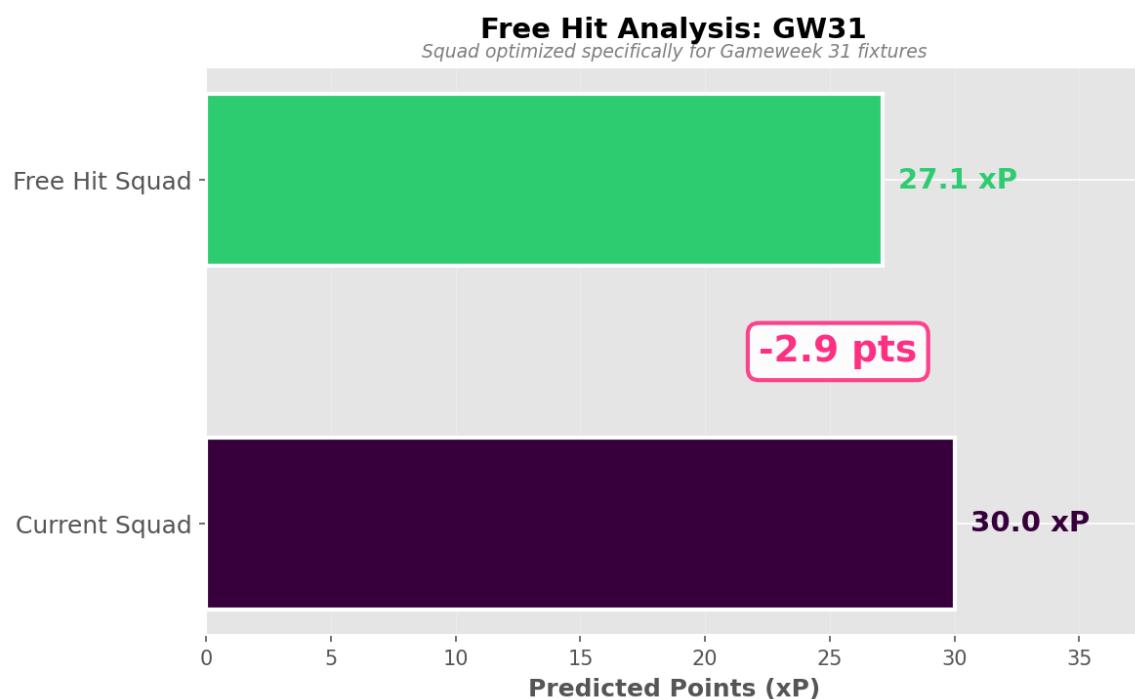

Figure 1: Free Hit GW31 Analysis

Chip Usage Strategy

Current Chip Status

Season Position: Second Half (GW20-38) — **Second Half (GW20-38) Chips Remaining:** 4/4
First half chips used: WC GW17, FH GW18, BB GW19

Chip Intelligence

Intelligence layer enabled - model: gpt-5.2

GW27 chip plan: prioritize Wildcard to fix 6 squad issues, then set up DGW33 bench/Triple Captain

With 4/4 chips remaining in GW27 and a squad carrying 1 injury plus 4 suspension risks and 2 price-drop risks (6 total issues), a Wildcard is the highest-impact lever. Use it to stabilize availability and value, while planning around BGW31 (4 teams missing) and the major DGW33 (8 teams doubled). Core line is to build towards DGW33 for BB/3xC, using FH only if BGW coverage becomes a material problem.

Metric Highlights

- Squad issues: 1 injured + 4 suspension risk + 2 price-drop risk = 6 issues driving high WC urgency
- Chips remaining: 4/4 in GW27 enables proactive planning rather than reactive single transfers
- Blank risk: BGW31 has 4 teams missing (confirmed), BGW34 has 6 teams missing (predicted)
- Double upside: DGW33 has 8 teams doubled (predicted), DGW36 has 4 teams doubled (predicted)
- Stated optimal synergy: WC in GW31 to build BB-ready bench, then BB in DGW33; alternative is FH in BGW31 to preserve squad for WC planning

Actions

- Treat Wildcard as the primary tool: address the 6 flagged issues (1 injury, 4 suspension-risk, 2 price-drop risk) by moving to safer minutes/discipline profiles and protecting team value.
- Start mapping your squad to DGW33 (8 doubles): prioritize building a playable bench so BB has upside, consistent with the DGW33 bench-boost target.
- Pre-plan BGW31 (4 teams missing): track your expected starters; if blanks would force multiple hits or fielding 11, earmark Free Hit for BGW31, otherwise keep FH for later BGW/DGW disruption (e.g., BGW34 with 6 missing predicted).
- Keep Triple Captain flexible but align it to DGW33: ensure you can own a premium captaincy option by then (explicitly Haaland/Salah noted) to maximize the chip ceiling.

Risks

- Using WC too early may reduce flexibility for BGW31 (4 teams missing) and the larger predicted BGW34 (6 teams missing) if fixtures/blank confirmations change.
- If DGW33 (8 teams doubled predicted) or BGW34/BGW37 predictions shift, chip timing built on projections may lose edge.
- Bench Boost value is capped if you Wildcard without building bench strength; BB is explicitly recommended for DGW33, so weak bench construction reduces ROI.

Squad Issues Affecting Chip Timing

- **Bruno G.** - injured (0.0% chance)
- **Roefs** - 3 yellow cards (risk at 5)
- **Alderete** - 4 yellow cards (risk at 5)
- **Bruno G.** - price falling
- **Hincapie** - price down this season

Chip Analysis

Wildcard	Available
<p>[HIGH PRIORITY] Play Wildcard as a strong candidate to resolve the 6 current squad issues (1 injury, 4 suspension risks, 2 price-drop risks) and pivot the squad towards DGW33 planning. <i>Would address: Bruno G. injured, Alderete 4 yellows, Gravenberch 4 yellows</i></p> <p><i>Cost of waiting: 18 pts/week from unaddressed issues</i></p> <p><i>Trigger: Activate when your next 1-2 GWs cannot reasonably clear the 6 issues with free transfers without sacrificing XI quality or value (especially with 2 price-drop risks).</i></p>	
<p>Free Hit</p> <p>Hold Free Hit unless BGW coverage becomes problematic; primary use is a BGW/DGW where you have significant team gaps (BGW31 or predicted BGW34).</p> <p><i>Trigger: Use if BGW31 (4 teams missing) or BGW34 (6 missing predicted) would leave you heavily short of starters or require multiple hits to field a competitive XI.</i></p>	
<p>Bench Boost</p> <p>Target Bench Boost in DGW33 where 8 teams are projected to double; build bench value beforehand.</p> <p><i>Trigger: Deploy in GW33 once you can start 15 players with strong minutes expectation and multiple doublers, consistent with the DGW33 (8 doubles) projection.</i></p>	
<p>Triple Captain</p> <p>Target Triple Captain in DGW33, but only after securing a premium captain option (Haaland/Salah) to maximize double-fixture upside.</p> <p><i>Trigger: Use in DGW33 when you own a premium with strong expected minutes across both matches and favorable fixtures within the 8-team double.</i></p>	

Chip Synergies

Combining chips strategically can maximize value:

- Treat Wildcard as the primary tool: address the 6 flagged issues (1 injury, 4 suspension-risk, 2 price-drop risk) by moving to safer minutes/discipline profiles and protecting team value.
- Start mapping your squad to DGW33 (8 doubles): prioritize building a playable bench so BB has upside, consistent with the DGW33 bench-boost target.
- Pre-plan BGW31 (4 teams missing): track your expected starters; if blanks would force multiple hits or fielding j11, earmark Free Hit for BGW31, otherwise keep FH for later BGW/DGW disruption (e.g., BGW34 with 6 missing predicted).
- Keep Triple Captain flexible but align it to DGW33: ensure you can own a premium captaincy option by then (explicitly Haaland/Salah noted) to maximize the chip ceiling.

Watch For These Triggers

Events that would change chip recommendations:

- Using WC too early may reduce flexibility for BGW31 (4 teams missing) and the larger predicted BGW34 (6 teams missing) if fixtures/blank confirmations change.
- If DGW33 (8 teams doubled predicted) or BGW34/BGW37 predictions shift, chip timing built on projections may lose edge.
- Bench Boost value is capped if you Wildcard without building bench strength; BB is explicitly recommended for DGW33, so weak bench construction reduces ROI.

Free Hit Squad Suggestion (BGW31)

Blank & Double Gameweek Calendar

Detected from fixtures data and FPL community predictions - plan your chips around these!

Gameweek	Type	Details
GW31	BGW	4 teams without fixtures
GW34	BGW	6 teams without fixtures (<i>predicted</i>)
GW37	BGW	2 teams without fixtures (<i>predicted</i>)
GW33	DGW	8 teams with double fixtures (<i>predicted</i>)
GW36	DGW	4 teams with double fixtures (<i>predicted</i>)

BGW = Blank Gameweek — DGW = Double Gameweek

Season Insights

Key Observations

Based on your squad's actual performance data:

- 1,373 total points through 27 gameweeks
- 50.85 average points per gameweek
- Projected final points: 1,932.4 at current pace
- Top performer: Haaland with 193 points (14.1% of total: 193/1,373)

Season Intelligence

Intelligence layer enabled - model: gpt-5.2

Solid season pace: 1,373 points after 27 GWs, projecting ~1,932

With 27 gameweeks played you're averaging 50.85 points/GW, which extrapolates to 1,932.4 total points—strong, steady returns rather than volatile spikes. Haaland has been your key anchor at 193 points, so maintaining reliable captaincy/ownership coverage of premium, high-floor assets remains central to protecting your current scoring rate.

Metric Highlights

- 1,373 total points through 27 gameweeks
- 50.85 average points per gameweek
- Projected final points: 1,932.4 at current pace
- Top performer: Haaland with 193 points (14.1% of total: 193/1,373)

Actions

- Keep captaincy weighted toward proven high-output picks; Haaland's 193 points indicate your premium core is delivering, so avoid unnecessary risk that could drag the 50.85 pts/GW run-rate.
- Plan transfers to preserve your current scoring pace (target maintaining ~51 points/GW); prioritize players with reliable minutes and consistent returns to sustain the 1,932.4 projection.
- Audit reliance on single-player output: since Haaland accounts for 193 points, ensure your next transfers strengthen secondary scorers so total points aren't overly concentrated.

Risks

- Over-reliance on one premium: Haaland's 193 points is a large share of 1,373, so any injury/rotation/dip can materially reduce your 50.85 pts/GW pace.
- Projection fragility: the 1,932.4 finish assumes the 50.85 pts/GW average holds; tougher fixtures, rotation, or missed captaincy hauls can quickly pull the projection down.
- If you chase variance aggressively while already on 1,373 points after 27 GWs, you risk undermining a strong baseline without clear upside.

Projected Performance

Projection based on 27 gameweeks played at 50.9 PPG average.

Key Insights

- Gap Analysis:** Study the points gap per gameweek to identify where elite managers gain.
- Chip Strategy:** Top managers often save chips for BGW/DGW opportunities.
- Captain Picks:** Elite players typically captain high-ceiling options.
- Transfer Discipline:** The best managers minimize transfer hits—quality over quantity.
